Francesco Moschioni

Barcelona, Spain · francesco.moschioni@upf.edu · framoschioni@gmail.com · +39 320 770 3896

Research Interests

Urban and Spatial Economics; Industrial Organization; Labour Economics

Education

MSc in Economic and Social Sciences, Bocconi University 2024 – 2026
Final grade: 110/110 cum laude · Average grade: 29.00/30
Thesis: *Bridge and Tunnel: The Geography of Substitution under New York's Congestion Pricing*
Advisor: Prof. Francesco Decarolis
Selected coursework: Econometrics (30L), Foundations of Economics II (30L), Labour Economics (30L), Public Economics (30), Bayesian Statistics (30), Statistics (30)

BSc in Economics and Finance, Bocconi University 2021 – 2024
Final grade: 109/110

Exchange Semester, Washington University in St. Louis (Olin Business School) Spring 2024
Grades: 29–30/30 in all courses (Italian conversion)

Italian grading: 30/30 maximum per course, 30L = with honours; degree grades out of 110.

Research Experience

Predoctoral Research Assistant, Universitat Pompeu Fabra Sep 2026 – present
To Prof. Jan Eeckhout; ERC project on labour markets and market power

Research Assistant, Social Inclusion Lab, Dondena Centre, Bocconi University Nov 2025 – Feb 2026
Supervisors: Prof. Alessandra Casarico, Dr. Luisa Carrer, Dr. Piera Bello

- Built a Python pipeline on the Scopus API to collect journal impact metrics and the metadata and author characteristics of papers citing retracted articles, for a project on retractions and gender in academia.
- Analysed the gender composition of editorial boards of economics journals (Stata, Python; fuzzy name matching, panel construction, geographic maps).
- Supported field work for a school survey on middle-school transitions in Milan.

Research

Optimal Urban Transportation Policy under Congestion Pricing: Evidence from New York City
Work in progress (working title)
Joint optimum of a cordon toll by time band, transit fares and frequencies, and taxi and ride-hail surcharges, from an eleven-mode demand system on 2025 trips, selected by a pre-registered specification tournament scored on the observed toll shock and embedded in a general-equilibrium model of road congestion and transit service.

Bridge and Tunnel: The Geography of Substitution under New York's Congestion Pricing
MSc thesis, Bocconi University, 2026
Estimate a random-coefficients nested-logit (BLP) demand system for eight transport modes across 263 New York City zones, built from administrative trip records, with gravity-model reconstruction of unobserved car and bus flows. The demand-side incidence of the 2025 congestion charge is not ordered by income alone: access to transit alternatives is a central determinant.

Professional Experience

Intern, Compass Lexecon, Milan Feb 2026 – Jun 2026
Empirical analysis for competition cases: data construction and robustness checks (Stata, Excel).

Policy Engagement

Research Fellow, Tortuga Think Tank Oct 2025 – present
Policy research on gender economics and public transport (Collaborator until Jun 2026).

Skills, Languages and Tests

Programming: Python (data pipelines, APIs, geospatial data, PyBLP, DuckDB), Stata (advanced), LaTeX, Excel; AI-assisted coding (Claude Code) with systematic verification
Methods: structural demand estimation (BLP, nested logit), gravity models, panel data and fixed effects, difference-in-differences and event studies
Languages: Italian (native), English (C1), French (B1–B2)
