

Francesco Moschioni

francesco.moschioni@studbocconi.it · +39 3207703896 · Barcelona, Spain (from Sept. 2026)

Research Interests

Macroeconomics; Industrial Organization; Urban and Spatial Economics

Incoming Position

Pre-Doctoral Research Assistant, Universitat Pompeu Fabra, Barcelona

Sept 2026 --

ERC Project on Labour Economics and Market Power (Supervisor: Prof. Jan Eeckhout)

Education

MSc Economics and Social Sciences, Bocconi University

2024--2026

GPA: 29.4/30; expected graduation: September 2026

Relevant coursework: Econometrics (30L), Labour Economics (30L), Public Economics (30), Advanced Statistics (30), Macroeconometrics

BSc Economics and Finance, Bocconi University

2021--2024

Final grade: 109/110

Exchange Student, Washington University in St. Louis

Spring 2024

GPA: 3.85/4

Research Experience

Research Assistant, Dondena Centre, Bocconi University

Nov 2025 -- Feb 2026

Social Inclusion Lab (Supervisor: Prof. Alessandra Casarico)

- Conducted **empirical analysis in Stata** on editorial board composition in top economics journals, constructing panel datasets to assess gender and ethnic representation over time using high-dimensional fixed effects.
- Developed reusable **Python data pipelines** (APIs, web scraping, basic NLP) to collect and process large-scale bibliographic data, used to study gender disparities in academia and heterogeneous effects of paper retractions.

Other Experience

Intern, Compass Lexecon

Feb 2026 -- May 2026

Supported empirical analysis in competition policy cases using large datasets, including data construction and robustness checks.

Research Projects

MSc Thesis in Empirical Industrial Organization and Urban Economics

2025--2026

Advisor: Prof. Francesco Decarolis

- Built scalable Python pipelines integrating trip records, transport networks, travel costs and times, survey evidence, and origin-zone demographics, processing source datasets with up to 1.3 billion observations.
- Developed and estimated a multimodal random-coefficients nested-logit demand model covering eight transport modes, 263 New York City taxi zones, and five time-of-day segments.
- Evaluated no-toll counterfactuals under partial equilibrium and congestion feedback, estimating heterogeneous substitution and demand-side incidence across income agents and locations.

BSc Thesis on Public Pension Systems and Policy Evaluation

Conducted cross-country harmonisation of pension system data to analyse **PAYG systems**, focusing on incentives, redistribution, and policy trade-offs.

Technical Skills

Econometrics & Methods: structural demand estimation, discrete choice models, panel data, high-dimensional fixed effects, causal inference, policy evaluation

Programming: **Python** (pandas, PyArrow, DuckDB, GeoPandas, large-scale pipelines), **Stata** (advanced), Excel, $\text{\LaTeX}$; Claude Code and OpenAI API

Languages

Italian (native); English (C1); French (B1--B2)
