

Francesco Moschioni

francesco.moschioni@studbocconi.it

Interested in pursuing a PhD in Economics in 2027

Availability: from Summer 2026

Research Interests

Urban and Spatial Economics; Industrial Organization; Public Economics

Education

MSc Economics and Social Sciences, Bocconi University

2024-2026

GPA: 29.4/30 ($\approx 3.92/4$); expected graduation: September 2026

Relevant coursework: Econometrics (30L), Advanced Statistics (30), Labour Economics (30L), Public Economics (30), Micrometrics, Macroeconometrics

BSc Economics and Finance, Bocconi University

2021-2024

Final grade: 109/110

Exchange Student, Washington University in St. Louis

Spring 2024

GPA: 3.85/4

Experience

Research Assistant, Dondena Centre, Bocconi University

Nov 2025 - Feb 2026

Social Inclusion Lab (Supervisor: Prof. Alessandra Casarico)

- Built reusable Python data pipelines (APIs, web scraping) to collect, clean, and integrate large-scale administrative and textual datasets.
- Conducted econometric analysis in Stata using high-dimensional fixed effects and DiD-style designs on panel data.
- Contributed to survey design, field data collection, and analysis of policy-relevant outcomes related to education and social inclusion.
- Developed reproducible workflows for data processing and empirical analysis.

Intern, Compass Lexecon (Economic Consulting)

Feb 2026 - May 2026

Supported empirical analysis in competition cases using large-scale datasets (Stata, Python). Performed data construction, cleaning, and robustness analysis in settings involving market structure and firm behavior.

Research Collaborator, Tortuga Think Tank

2025-present

Contributed to applied policy research, translating empirical analysis into reports for institutional and non-academic audiences.

Fellow, Economic Society for Bocconi Students (ESBS)

2025-present

Member of the Microeconomics group; presented and discussed academic papers.

Research Projects

MSc Thesis in Empirical IO and Spatial Economics (work in progress)

2025-present

Advisor: Prof. Francesco Decarolis

- Designed and implemented scalable **Python pipelines** to integrate heterogeneous mobility datasets (taxi, ride-hailing, public transit, bike-sharing), handling up to **1.3B observations**.
- Constructed high-dimensional origin-destination panels combining geospatial data and transport networks.
- Developing a **structural demand model** (Mixed Logit / BLP) to estimate substitution patterns across differentiated transport modes.
- Studying **pricing and market interactions** in spatially differentiated markets, accounting for endogeneity using instrumental variables.
- Built modular and reproducible workflows for large-scale empirical and structural analysis.

BSc Thesis on Public Pension Systems and Policy Evaluation

Conducted cross-country harmonization of administrative data to study **PAYG systems**, focusing on incentives, redistribution, and policy trade-offs.

Technical Skills

Econometrics & Methods: panel data, causal inference, discrete choice models, structural demand estimation.

Programming: Python (pandas, PyArrow, DuckDB), Stata, Excel, LaTeX.

Languages

Italian (native); English (C1); French (B1-B2)
